EDUCATION

Korea University | GPA: 3.97/4.5

Mar 2023 - Feb 2029

Department of Computer Science; Public Governance and Leadership

PROJECTS & AWARDS

Pension AI Agent

Jul 2026 - Present

Team Lead & PM • AI Developer

- Led end-to-end product and AI development, designing a hierarchical multi-agent orchestration in which an HCX-based Sub-Agent supervises the full pipeline, detects cross-stage defects, and routes failed outputs to the appropriate layer for revision or recovery
- Architected a hallucination-resistant pension QA pipeline that separates deterministic calculation and decision logic from LLM generation, combining BM25 + multilingual-e5-small hybrid RAG with RRF over 8,172 chunks, bidirectional numeric grounding, and 29 domain-trap validation rules
- Built a 62-module, 20,164-line Python codebase with all 1,476 regression tests passing; increased product-classification evidence coverage by 22.8 percentage points

Tech Used: Python, HyperCLOVA X, Multi-Agent Orchestration, BM25, multilingual-e5-small, RRF, RAG, ThreadPoolExecutor, Claude (Claude Code)

AI-Based Youth Experience Archiving & Analysis Service 'ARC'

Mar 2026 - Present

Air Force Startup Competition • PM & AI Developer

- Defined ARC's product concept to address youth job seekers' lack of self-understanding and passive job searching; designed the AI analysis logic and resume/portfolio generation functions; produced the market-validation and AI-technology sections of the IR presentation; coordinated planning and development with 4 teammates
- Mitigated AI hallucination using embedding-vector-based cosine similarity clustering
- Completed the web prototype (story-arc.org) and tested it with 20 domestic and international university students
- Advanced to the Air Force Startup Competition finals, earned the Creativity Award, and progressed to the Ministry of National Defense Startup Competition; 30 of 337 teams (8.9%) received awards

Tech Used: Market Research, Data Analysis, AI Model Design, Business Planning, IR Presentation, Claude (Claude Code)

Stock Price Analysis and Prediction Project

Jan 2026 - Mar 2026

- Researched the potential to improve individual investors' returns by using the Gemma-2 LLM to convert unstructured news data into quantitative investment indicators
- Developed a buy-signal generation pipeline by integrating Google News RSS with date-precise news collection and combining SMA(20/60) technical indicators with 2-gram-based news sentiment scores
- Conducted backtesting and visualization to compare strategy returns against market returns
- Validated the strategy's effectiveness as returns improved with greater article volume and broader collection windows, outperforming the S&P over the same period

Tech Used: Python, Gemma-2-2b-it, Transformers, yfinance, Pandas, NumPy, Matplotlib, Google News API, FinBERT, Claude (Claude Code)

EXTRACURRICULAR ACTIVITIES

Osan Air Base Interpretation & Training Support

Jun 2025 - Present

Osan Air Base • Interpretation and Translation

- Supported FS and UFS Korea-U.S. combined exercises through interpretation and translation
- Facilitated inter-agency coordination and commander-level/U.S.-side event participation through interpretation

CLUBS & SOCIETIES

ALSA (Asian Law Students' Association)

Mar 2023 - Jun 2024

Inter-University Club • Branch Officer, PR Head

- Represented a branch of the Asian Law Students' Association, an inter-university network spanning 16 Asian countries
- Engaged in branch presentations, legislative seminars, civil/criminal moot court, and international law discussions

Korea University College of Liberal Studies Student Council

Mar 2023 - Mar 2024

On-Campus Club • Culture Department Member

- Planned events including Homecoming Day, a mentoring program, and the Joint Jusis Preparation Committee as a Culture Department member

Korea University Central Computer Club (KUCC)

Aug 2024 - Dec 2024

University-Wide Club

- Studied backend development through club sessions and networked with industry professionals

SKILLS

Technical Stack: Python, Multi-Agent Orchestration, Gemma-2-2b-it, Transformers, BM25, multilingual-e5-small, RRF, RAG, yfinance, Pandas, NumPy, Matplotlib, Google News API, FinBERT

Soft Skills: Market Research, Data Analysis, AI Model Design, Business Planning, IR Presentation, Entrepreneurship, Translation, Law, Leadership, Self-Governance Activities, Collaboration
